2012 MODELS

ALUMACRAFT®

Any Spt models can be converted to a double bubble.
3/22/12 per Ken

Celebrating a
**TRADITION of
EXCELLENCE**

COMPETITIVE DIFFERENCE

Better BUILT

Can a boat be tough but agile? Strong but light on its feet?

It can if it's an Alumacraft.

Full-length double plating means twice the strength and protection all the way to the transom—without compromising agility. Compare our twin-plated 2XB hull models against competing boats that have at best only twin-plating in the bow.

One-piece, single-sheet aluminum finely cut and shaped for the greatest possible inherent strength

Top-quality aluminum hulls with larger aircraft-grade rivets for longevity

Durable wood-free, heavy-gauge aluminum seating and stringers

Twin-plated 2XB hulls provide superior strength

A sustainable and larger, one-piece, hardened heavy-duty keel

Full-length, oversized spray rails for a drier ride in rough water

Water-tested hulls ensure rivet and weld integrity

Gas-resistant expansion foam increases buoyancy and quiets the ride

Convenient wood-free storage and livewell compartment hatches

The highest quality marine-grade plywood and carpeted decks

Automotive-grade base/clear coat paint with top-quality graphics

Quality fit and finish from bow to stern for practicality and appeal

Better RIDE

Smooth, quiet, responsive.

That's what you want in a boat, and that's exactly what Alumacraft delivers.

Alumacraft's exclusive hull design gives you a superior ride with our double-plating and solid bottom construction that dramatically reduces sound and vibration from below.

Plus, our 2XB hull models produce minimal flexing that can adversely affect handling.

Better VALUE

What do you get when you combine a better build with a better ride?

Better value.

Only Alumacraft has a decades-long reputation for delivering a hull you can count on, a ride you can groove on, and a price you can bank on.

Alumacraft Difference

Let's face it, things can get pretty confusing when you shop for a boat. Manufacturers love to talk about all their features. But what most customers really want to know is this: What do your boats have that their boats don't? So here's the straight truth about what you can only get with an Alumacraft.

1. FULL-LENGTH, ONE-PIECE OVERSIZED RIBS ON OUR RIVETED BOATS

What it means to you: strength and dependability.

Our ribs are 12" on center on our all-welded boats, 15" on center on our riveted boats. The competition uses fewer ribs and spaces them wider, which is a little like building a house out of code. Sure, it costs a bit more to build our boats this way, but we want yours to last.

2. ONE-PIECE HULL CONSTRUCTION

What it means to you: no metal fatigue and a quieter ride.

The competition uses as many as three pieces for their hulls. All that welding creates more margin for error and affects the quality of your ride. Combine our one-piece hull with our oversized ribs, and you know you're getting a superior boat that's both quiet and built to last.

3. MORE KEEL BREAKS

What it means to you: a stronger hull. (A keel break is built-in or pressed ribs in your hull.)

At Alumacraft, we build our keels with more pressed ribs than the competition—because more "breaks" means a stronger hull. Combine Alumacraft's seven keel breaks on welded products with our oversized ribs, stringers and one-piece hull construction, and you've got the strongest hull for your money. Period.

4. ALUMINUM TRANSOM CONSTRUCTION

What it means to you: all-welded joins with an all-aluminum transom featuring heavy-welded box channels with .125 aluminum on both sides.

Sure, this isn't something you can see from the outside, but when you ride an Alumacraft, you can rest assured that your motor is sitting on what we believe to be the strongest transom in the business.

5. WELDED FLOORS

What it means to you: a quieter, finished floor.

The other guys use rivets on their floors; we weld ours in. The result is not only a quieter floor, but also the peace of mind that you won't pop rivets when you're in the rough stuff. Plus, unlike our competitors, Alumacraft gives you an all-welded jon boat (with floor) that also includes aluminum sides. That's the whole package—and better value.

6. RIVETED BOAT TRANSOMS

What it means to you: a more reliable boat.

The outside of a riveted jon boat transom may look the same from boat to boat, but the real difference is on the inside. Some of the competition will only use a 6" board from the top. At Alumacraft, we support our transoms the full height—giving you the quality and value you expect for your hard-earned money.

PRO PACKAGES

Alumacraft's Pro is a tournament-style boat that's well-equipped with tons of storage and raised fishing platforms for a full day of leisure or competition.
